FAB AUSSIE WALLS COMING TO CANADA

Integrated Wall Systems brings Australian technology to Canuck builders

Newton, ON – Imagine a barrier wall strong enough to stand up to hurricane force winds, light enough to be erected by a single person and durable enough to withstand the test of time?

Australia's Modular Wall Systems did – and the patented composite panel technology that revolutionized the design and construction of perimeter barriers down under is now available here, thanks to Integrated Wall Systems of Perth County, ON.

“We're very excited to be bringing this product to Canada,” says Susan Faber, one of Integrated Wall Systems' three Canadian owners.

Most barrier walls are either made of concrete or wood, she explains. “Ours are built out of foam core concrete board panels that can be stacked up to 18 feet tall. They use a third of the concrete found in traditional block walls, they're just as strong and they can be erected or taken down very easily.”

Nick Holden, President of Australia's Modular Walls Systems, says the company's walls have proven themselves to be as popular with home owners as they are with developers and municipalities.

“Cost-effective, easy to install and guaranteed to last ... it's been a winning combination for us and it's going to be a winning combination for Integrated, too. We can hardly wait to start shipping product.”

Integrated Wall Systems plans on erecting its first wall in Canada later this year. Whether you're a home owner, a developer or a municipality, you owe it to yourself to check out all of the features an Integrated wall has to offer: For more information, contact Integrated Wall Systems today.
